

Application Serial No. 09/887,519

LISTING OF CLAIMS

- 1 1. (Currently Amended) A movable support system adapted for
2 providing at least one display device within a work space having a floor and
3 configured for use by at least one user comprising:
4 a mounting structure;
5 a track system mounted to the mounting structure and providing a
6 track;
7 ~~a base movably mounted at a first section to the track system;~~
8 a display support assembly having a first section movably coupled to
9 the track and a second section projecting beyond the track into the work space and
10 configured for attachment of at least one display device adapted for coupling of the
11 ~~display device and pivotally mounted at a second section of the base and;~~
12 a work surface mounted to the mounting structure above the first
13 section of the display support assembly over the track;
14 wherein a display device installed on the display support assembly
15 may be selectively positioned for use within the work space in a variety of positions
16 by (a) movement of the display support assembly relative to the mounting structure
17 and (b) movement of the display device relative to the display support assembly;
18 ~~and locations relative to the track system.~~
19 wherein the second section of the display support assembly is
20 cantilevered away from the mounting structure so that clearance is provided
21 between the display support assembly and the floor of the work space.

1 2. (Original) The system of Claim 1 wherein the track is linear.

1 3. (Original) The system of Claim 1 wherein the track is coupled to an
2 article of furniture.

1 4. (Original) The system of Claim 1 wherein the track is mounted on
2 storage furniture.

Application Serial No. 09/887,519

1 5. (Previously Canceled) The system of Claim 1 wherein a work surface
2 is mounted over the track.

1 6. (Currently Amended) The system of Claim 1 wherein the display
2 support assembly provides a plurality of arms.

1 7. (Currently Amended) The system of Claim 1 wherein the display
2 support assembly is configured to provide at least one passage for management of
3 one or more cables coupled to the display device.

1 8. (Currently Amended) The system of Claim 1 wherein the display
2 support assembly includes a hub providing for management of one or more cables
3 coupled to the display device.

1 9. (Currently Amended) The system of Claim 1 wherein the display
2 support assembly is configured for coupling of two display devices.

1 10. (Currently Amended) The system of Claim 1 wherein the display
2 support assembly includes a pair of flanges and a pair of arms and a display device
3 is attachable to each of the pair of arms.

1 11. (Currently Amended) The system of Claim 1 further comprising at
2 least one display device coupled to the display support assembly.

1 12. (Currently Amended) The system of Claim 1 wherein the display
2 support assembly is cantilevered from the track.

1 13. (Currently Amended) The system of Claim 1 wherein the display
2 support assembly is perpendicular to the track.

1 14. (Currently Amended) The system of Claim 1 wherein the display
2 support assembly is non-pivotably mounted to the track.

Application Serial No. 09/887,519

1 15. (Currently Amended) The system of Claim 1 configured for use in a
2 work space providing at least one mobile table and wherein the display support
3 assembly is at a height above the mobile table.

1 16. (Currently Amended) The system of Claim 1 wherein the display
2 support assembly is configured for at least two display panels.

1 17. (Original) The system of Claim 8 wherein the management of one or
2 more cables is provided at least partially through one or more passages.

Application Serial No. 09/887,519

1 18. (Currently Amended) An apparatus providing a movable support
2 system adapted for providing for a display device within a work space having a floor
3 and configured for use by at least one user comprising:

4 a mounting structure;

5 a track system mounted to the mounting structure and providing at
6 least one track;

7 ~~a support movably coupled at a first section to the track system;~~

8 a display support assembly having a first section movably coupled to
9 the track and a second section projecting beyond the track into the work space and
10 configured for attachment to movably coupled to a second section of the support
11 ~~and configured for coupling of~~ at least two display panels;

12 a worksurface mounted to the mounting structure above the first
13 section of the display support assembly;

14 wherein each of the display panels is coupled to the second section
15 of the display support assembly by an arm providing a first joint and a second joint;
16 and

17 wherein each of the display panels may be selectively positioned for
18 use within the work space in a variety of positions by (a) movement of the display
19 support assembly relative to the mounting structure and (b) movement of the
20 display panels locations relative to the display support assembly track by movement
21 ~~about at least one of a first joint, a second joint and a third joint~~ the arm; and

22 wherein the second section of the display support assembly is
23 cantilevered away from the mounting structure so that clearance is provided
24 between the display support assembly and the floor of the work space.

1 19. (Original) The apparatus of Claim 18 wherein the track system is a
2 linear track.

1 20. (Original) The apparatus of Claim 18 wherein the track is mounted to
2 an article of furniture.

Application Serial No. 09/887,519

1 21. (Original) The apparatus of Claim 18 wherein the track is mounted on
2 storage furniture.

1 22 (Original) The apparatus of Claim 18 wherein a work surface is
2 mounted over the track.

1 23. (Currently Amended) The apparatus of Claim 18 wherein the display
2 support assembly has at least two articulable arms.

1 24. (Currently Amended) The apparatus of Claim 18 wherein the display
2 support assembly is configured to provide a passage for management of wires.

1 25. (Currently Amended) The apparatus of Claim 18 wherein the display
2 support assembly manages wires through a hub.

1 26. (Currently Amended) The apparatus of Claim 18 wherein the display
2 support assembly is pivotably coupled to the display support assembly at a hub.

1 27. (Currently Amended) The apparatus of Claim 18 wherein the display
2 support assembly provides at least two flanges each for attachment of at least one
3 articulable arm attachable to at least one display device.

1 28. (Currently Amended) The apparatus of Claim 18 further comprising at
2 least one display device coupled to the display support assembly.

1 29. (Currently Amended) The apparatus of Claim 18 wherein the display
2 support assembly is cantilevered from the track.

1 30. (Currently Amended) The apparatus of Claim 18 wherein the display
2 support assembly is perpendicular to the track.

1 31. (Currently Amended) The apparatus of Claim 18 wherein the display
2 support assembly is non-pivotably mounted to track.

Application Serial No. 09/887,519

1 32. (Currently Amended) The apparatus of Claim 18 configured for use in
2 a work space providing at least one mobile table and wherein the display support
3 assembly is at a height above the mobile table.

1 33. (Currently Amended) The apparatus of Claim 18 wherein the display
2 support assembly is configured to provide at least one passage for management of
3 at least one cable coupled to the display device.

Application Serial No. 09/887,519

1 34. (Currently Amended) A movable support system adapted for
2 providing at least one display device within a work space having a floor and
3 configured to be coupled to utilities such as power or data through cables,
4 comprising:

5 a mounting structure;

6 a track system mounted to the mounting structure and providing a
7 track;

8 ~~a support movably mounted at a first section to the track;~~

9 a display support assembly having a first section movably coupled to
10 the track and a second section cantilevered away from the mounting structure and
11 projecting beyond the track into the work space and configured for attachment of
12 the display device so that a clearance is provided between the display support
13 assembly and the floor of the work space; adapted for coupling of a display device
14 ~~and pivotally mounted at a second section of the support; and~~

15 a work-surface mounted to the mounting structure above ~~over the~~
16 first section of the display support assembly track;

17 wherein ~~a~~ the display device installed on the display support assembly
18 may be selectively positioned for use within the work space in a variety of positions
19 ~~locations~~ relative to the track by (a) movement of the display support assembly
20 relative to the mounting structure and (b) movement of the display device relative to
21 the display support assembly; and

22 wherein the display support assembly is configured to provide at least
23 one passage for management of cables configured to be coupled to the display
24 device.

1 35. (Original) The system of Claim 34 wherein the track is linear.

1 36. (Original) The system of Claim 34 wherein the track is coupled to an
2 article of furniture.

Application Serial No. 09/887,519

1 37. (Original) The system of Claim 34 wherein the track is mounted on
2 storage furniture.

1 38. (Previously Canceled) The system of Claim 34 wherein a work
2 surface is mounted over the track.

1 39. (Currently Amended) The system of Claim 34 wherein the display
2 support assembly provides a plurality of arms.

1 40. (Currently Amended) The system of Claim 34 wherein the display
2 support assembly is configured to provide at least one passage for management of
3 a cable coupled to the display device.

1 41. (Currently Amended) The system of Claim 34 wherein the display
2 support assembly includes a hub providing for management of one or more cables
3 coupled to the display device.

1 42. (Currently Amended) The system of Claim 34 wherein the display
2 support assembly is configured for coupling of two display devices.

1 43. (Currently Amended) The system of Claim 34 wherein the display
2 support assembly includes a pair of flanges and a pair of arms and a display device
3 is attachable to each of the pair of arms.

1 44. (Currently Amended) The system of Claim 34 further comprising at
2 least one display device coupled to the display support assembly.

1 45. (Currently Amended) The system of Claim 34 wherein the display
2 support assembly is cantilevered from the track.

1 46. (Currently Amended) The system of Claim 34 wherein the display
2 support assembly is perpendicular to the track.

Application Serial No. 09/887,519

1 47. (Currently Amend d) The system of Claim 34 wherein the display
2 support assembly is non-pivotably mounted to track.

1 48. (Currently Amended) The system of Claim 34 configured for use in a
2 work space providing at least one mobile table and wherein the display support
3 assembly is at a height above the mobile table.

1 49. (Currently Amended) The system of Claim 34 wherein the display
2 support assembly is configured for at least two display panels.

1 50. (Currently Amended) The system of Claim 34 wherein the
2 management of cables is provided at least partially through passages in the display
3 support assembly.

Application Serial No. 09/887,519

1 51. (Currently Amended) A movable support system adapted for
2 providing at least one display device configured for use by at least one person in a
3 work space having a floor and an entrance, comprising
4 a mounting structure;
5 a track system mounted to the mounting structure and providing a
6 track;
7 ~~a base movably mounted at a first section to the track system;~~
8 a display support assembly having a first section movably coupled to
9 the track and a second section projecting beyond the track into the work space and
10 configured for attachment of at least one display device adapted for coupling of at
11 ~~least one display device and pivotally mounted at a second section of the base;~~
12 wherein a display device installed on the display support assembly
13 may be selectively positioned for use within the work space in a variety of ~~locations~~
14 positions relative to the track system by (a) movement of the display support
15 assembly relative to the mounting structure and (b) movement of the display device
16 relative to the display support assembly about at least one of a first joint, a second
17 joint and a third joint; and
18 wherein the second section of the display support assembly is
19 cantilevered away from the mounting structure so that clearance is provided
20 between the display support assembly and the floor of the work space;
21 so that each person within the work space may selectively choose a
22 body orientation or a body position relative to the entrance or otherwise within the
23 workspace while using the display device.

1 52. (Currently Amended) The system of Claim 51 wherein a range of
2 motion provided by ~~at least one of the base or display support assembly~~ is such that
3 the body orientation or body position of at least one person using the display device
4 in the work space relative to the entrance may include (a) back to the entrance; (b)
5 face to the entrance; or (c) profile or side to the entrance.

Application Serial No. 09/887,519

1 53. (Currently Amended) The system of Claim 51 wherein a position of
2 the person relative to the display device can be adapted from a first position where
3 information contained on the display device is not perceptible to the person to a
4 second position where information contained on the display device is perceptible to
5 the person by relative movement ~~at least one of the base or the display support~~
6 ~~assembly device~~ and without requiring that the person make substantial change in
7 body orientation or body position.

1 54. (Currently Amended) The system of Claim 51 wherein one or both of
2 two users can adapt the position of at least one display device to improve the
3 viewing position for perception of information on the display device by movement of
4 ~~at least one of the base or the display support assembly.~~

1 55. (Currently Amended) The system of Claim 51 wherein the display
2 device can be moved using ~~at least one of the base or the display support assembly~~
3 from a non-use position where information contained on the display device is not
4 perceptible to the person to an in-use position where information contained on the
5 display device is perceptible to the person.

1 56. (Original) The system of Claim 51 wherein the display device is
2 configured for use by a plurality of users including a first group of at least one
3 person and a second group of at least one person and for movement between a first
4 position and a second position so that in the first position information contained on
5 the display device is perceptible to the first group and in the second position
6 information contained on the display device is perceptible to the second group, the
7 information being private or concealed to the second group of users in the first
8 position and public or visible to the second group of users in the second position.

Application Serial No. 09/887,519

57. (Currently Amended) The apparatus of Claim 18 wherein the first joint comprises a pivotable joint between the display support assembly and the display device and the second joint comprises a pivotable joint between the display support assembly and the display device ~~and the third joint comprises a pivotable joint between the support and the display device~~ so that the display device is selectively repositionable relative to the support in at least one of upwardly, downwardly, laterally and pivotably.

58. (Currently Amended) The apparatus of Claim 51 wherein the first joint comprises a pivotable joint between the ~~base~~ second section of the display support assembly and the display device and the second joint comprises a pivotable joint between the ~~base~~ second section of the display support assembly and the display device and the third joint comprises a pivotable joint between the ~~base~~ second section of the display support assembly and the display device so that the display device is selectively repositionable relative to the ~~base~~ display support assembly in at least one of upwardly, downwardly, laterally and pivotably.
